

## PRESS RELEASE

# **Pletos**: a mobile application to predict professional matches of League of Legends

**Lille, 2 june 2020 - As LEC and LCS summer splits are about to start, 3 french engineers are launching Pletos: a free mobile app allowing its users to start a predictions contest.**

### Predictions for everyone...

Whether on Twitter, Facebook or just with friends, esports fans love to challenge each other in terms of predictions about their favourite teams' matches, so much that even the production teams publish theirs every week.

However, once done, these predictions are lost. No one is there to keep track of the scores, except for that little spreadsheet that hangs out between a few groups of friends.

**Pletos** allows everyone to predict LEC and LCS matches before they start, but also to create groups of friends for direct competition. The points are calculated according to the complexity of the prediction: an exact score of the match will unlock more points than just guessing the winner.

Thanks to real-time information updates, **Pletos** allows you to keep an eye on the outcome of the match in real time, as well as an update of the ranking.

Today, **Pletos** allows you to follow the LEC and LCS, but plans to support the majority of major and regional leagues, including LCS Academy and european regional leagues, by January 2021.

## ... but also for communities

Thanks to its partnership system, **Pletos** allows communities to gather in a single group and compete without having to add each other manually.

The partner program provides partners with a customizable leaderboard, open to the public.

## About

**Pletos** is a project of 3 french engineers who are passionate about esports, video games in general and adventures. As a player, each member of the team understands and is willing to improve the social experience that is online gaming. Previously, the team worked on QueueUp (a League of Legends and/or Fortnite player matchmaking application) and has always wanted to provide an enjoyable experience to the community.
